IX series
ISHIDA X-ray Inspection System
Protecting your customer and your brand
ISHIDA X-ray Inspection Systems

ISHIDA X-ray inspection can be used at any stage in your production line to identify with the greatest accuracy and reliability when foreign bodies are contaminating your product, thus protecting your brand and reassuring your customers.

Benefits of an X-ray inspection system

X-ray inspection has several key benefits, especially for food producers, that are fundamentally linked to safety and quality:

- **Brand protection**
  - Customers will trust the product

- **Food safety**
  - The food is free of foreign bodies and safe to eat

- **Can do much more than just finding foreign bodies:**
  - Counting components
  - Weight estimation
  - Checking fill level
  - Detecting flaws such as missing or broken items
  - Measuring product size
  - Sealing control

  All these functions in one machine lead to a cost-effective and efficient performance

- **Cost savings due to no product recalls and customer complaints**
  - Fewer recalls and customer complaints lead to less fines

- **Confidence**
  - You as a supplier are using the state-of-the-art technology and can therefore be confident of quality

- **Due diligence / auditing**
  - Up-to-date records of all products including rejects, with all data and images stored securely

Finds metal, glass, stone, bone, shell, rubber and dense plastics
What if detection is needed for multiple types of foreign bodies in one product?

Evolutionary image processing* (GA)

GA (Genetic Algorithm) is a patented technique which is used exclusively in our IX Series. It allows you to accomplish a very high detection sensitivity on your products which cannot be accomplished anywhere else.

The use of GA allows the user to optimise the X-ray machine for their own unique product characteristics. Each GA can be tuned to focus on a specific foreign body that pose an inherent risk to the product. As such, every ISHIDA instrument can be uniquely and easily optimised to meet your specific challenges.

GA benefits

• Improves sensitivity and detection rate
• No need to send product or contaminant to a manufacturer’s lab – everything is done on site
• No need for service engineer or operator intervention

Highly sensitive foreign body detection using Genetic Algorithm (GA) technology

Example: detecting foreign matter in a pack of sausages

---

**End view**

- X-ray generator tube
- X-ray irradiation
- Product travelling
- Line sensor
- Conveyor

---

**Front view**

- Cooling fan
- X-ray generator tube
- Anode
- Cathode
- Product travelling
- Line sensor

---

**Integrated solution with reject**

- Sloped surfaces
- 17” Screen (GN - series)
- Guarding
- Lockable reject bin

---

**Example: detecting foreign matter in a pack of sausages**

**Generation 100**

- Un-evolved image processing
- Foreign matter cannot be identified from the uneven profile of the sausages

**Generation 1,000**

- Image processing in evolution
- Background product effect is reduced enabling foreign bodies to be identified

**Generation 10,000**

- Evolved image processing
- The background product effect is further reduced enabling foreign bodies to be identified

---

* “Evolutionary image processing” is a registered trademark of Yokohama National University.
The benefits of low voltage

For contaminants of low density, such as bones in meat products, lower voltage X-rays created by using less kV show a greater difference between the elements.

Our most popular model of IX machines use a 300W generator, which allows us to vary the kV value from 25-75kV and the current from 1-8 mA (depending on the model).

The ability to vary the KV and mA gives ISHIDA a strong advantage in the detection of lower density foreign bodies.

The graph below shows how different materials behave with low and high levels of energy. The lower the energy, the higher the absorption difference which leads to better detection results.

Examples with rubber ball

The image below depicts the effect of using lower voltage X-rays, with the rubber ball being more clearly visible in the right hand image, because the rubber stops a greater percentage of the X-rays penetrating through when lower energy is used.

Hygienic

The device is HACCP-compliant (IP66), boasting an all-stainless steel structure and waterproof inspection chamber. The protective curtains and conveyor can be removed easily without tools.

Easy removal and refitting of components

GN model is supplied with Magnetic interlock. A mechanical interlock system on other models makes the process of removing and reinstalling protective curtains extremely simple, reducing the risk of damage to the switch.
**IX-G2 series**

Dual Energy Sensor detects what other inspection systems miss

Most effective X-ray detection of low-density objects, including bone, shell, metal, glass and rubber.

Ergonomic, stainless steel design, making it easy to clean.

- Pinpoint detection of foreign bodies under 0.6mm thanks to enhanced G2 technology, from shell and stone, to metal and bone.
- Accurate X-ray inspection capable of handling packaged products with uneven surfaces, granular products and overlaps.

![Bone detected](image1.png)

- Conventional

![Bone not detected](image2.png)

- IX-G2

* Products which include different thicknesses, are overlapping etc.

For detailed information on the applications the IX-G2 series can handle, please refer to the "Foreign Body detection matrix" table on the page 15.

**Examples of complex products**

- Poultry
- Vegetables
- Cereals
- Overlapping meat products
- Bones
- Stones
- Glass

**Examples of low density foreign bodies**

- Vegetables
- Meat products
- Poultry
- Cereals

**Examples of uniform products**

- Stainless Steel
- Ferrous/Non-Ferrous
- Glass
- Teflon, PVC
- Stones

**Examples of complex products**

- Stainless Steel
- Ferrous/Non-Ferrous
- Glass
- Teflon, PVC
- Stones

**IX-GN series**

The definite choice for a wide range of products

GN series provides high-performance X-ray inspections for an unrivalled range of foreign matter.

Ergonomic, stainless steel design, making it easy to clean.

- Unrivalled versatility for a wide range of packed and unpacked products.
- GA image processing automatically generates optimal sensitivity for fast and efficient product changeovers.
- Integrated air conditioning system.
- User-friendly 17" touch screen control.

![Bone detected](image3.png)

- IX-GN

* A group of products that are standardized or identical.
** Products which include different thicknesses, are overlapping etc.

For detailed information on the applications the IX-GN series can handle, please refer to the "Foreign Body detection matrix" table on the page 15.

**Examples of complex products**

- Meat
- Cereals
- Yoghurt pots
- Sausages

**Examples of uniform products**

- Bread, cookies
- Cheese
- Confectionery
- Ice cream
IX-EN series

Your first step into ISHIDA X-ray technology

The X-ray inspection system that enhances quality control on your production line, both affordably and effectively.

• Reliable inspections suitable for uniform products.
• Easy to set up and integrate into your production line.
• User-friendly 15" touch screen control.

IX Middle/Large series

All the security of X-ray inspection for middle and large items

IX-GN-5523/IX-EN-5592

• With an inspection chamber of 550mm wide and 270mm height the IX-GN-5523 and IX-EN-5592 can inspect a 25kg bag or block of butter/cheese.
• Up to 6 lanes multi-lane inspection or bulk product inspection is also available.

IX-GA-65100

• With X-ray tube voltage of up to 100KV, IX-GA-65100 can handle a 65cm-wide box carton.
• Items can be up to 25kg (option 50kg).

For detailed information on the applications the IX-EN series can handle, please refer to the "Foreign Body detection matrix" table on the page 15.

For detailed information about IX-GN-5523, IX-EN-5592 and IX-GA-65100 series, please refer to the "ISHIDA X-ray differentiation" table on the page 14.
**IX IP69K rated model**

**IX-GA-2475-DK**  
**IX-GA-4075-(A)DK**

**Durable and hygiene design for high pressure washing**

The IX-GA DK series are fully equipped with special features for keeping out water.

- Resin cover for the touch screen panel and the stack light.
- The IP69K-compliant key switch and emergency switch.
- Integrated water cooling type air conditioning system.

---

**Complex* products**  
- Bones  
- Stones  
- Glass

**Low density foreign bodies**  
- Poultry  
- Fish filet  
- Sailed  
- Cheese

---

**IX Specialized series**

**IX side beam model**

**IX-GA-B3043**

- Achieves industry leading sensitivity.
- Easy-to-install in existing production lines.
- Small footprint.
- Automatic bottle pitch control.
- The unique way that the ISHIDA side beam is designed means that no protective curtains are needed, ensuring perfect product transition.

---

**IX compact model**

**IX-GE-1063**

- Affordable system for accurately detecting foreign bodies and product defects.
- Small footprint.
- Easy to operate, clean and maintain.

---

**IX-GA-2475/4075-DK**

**IX Specialized series**

**Examples of upright products**  
- PET bottles  
- Pouch packaging  
- Tetra-pak  
- Cartons

**Examples of complex products**  
- Stainless Steel  
- Ferrous/Non-ferrous  
- Glass

**Examples of small products**  
- Tablets  
- Small packages of seasoning  
- Dessert cups  
- Lollipops

* Products which include different thicknesses, are overlapping etc.

---

For detailed information about IX-GA DK series, please refer to the "ISHIDA X-ray differentiation" table on the page 14.
